Laravel Project Setup — A Complete Guide

1. Open the XAMPP Directory Launch Command Prompt and navigate your working directory to the XAMPP htdocs folder using the path below:

```
C:\xampp\htdocs
```

2. Create a New Laravel Project Once you are inside the directory, run the following command to create a brand new Laravel project named **aanas**:

```
laravel new aanas
```

3. Configure the Installation Settings As the setup process runs, respond to each prompt with the options listed below. Select **None** for the Starter Kit and **0** for the Testing Framework. Choose **No** for AI-assisted coding and set the database to **MySQL**. When asked about default database migration, select **Yes**, and similarly select **Yes** for ignoring scripts.

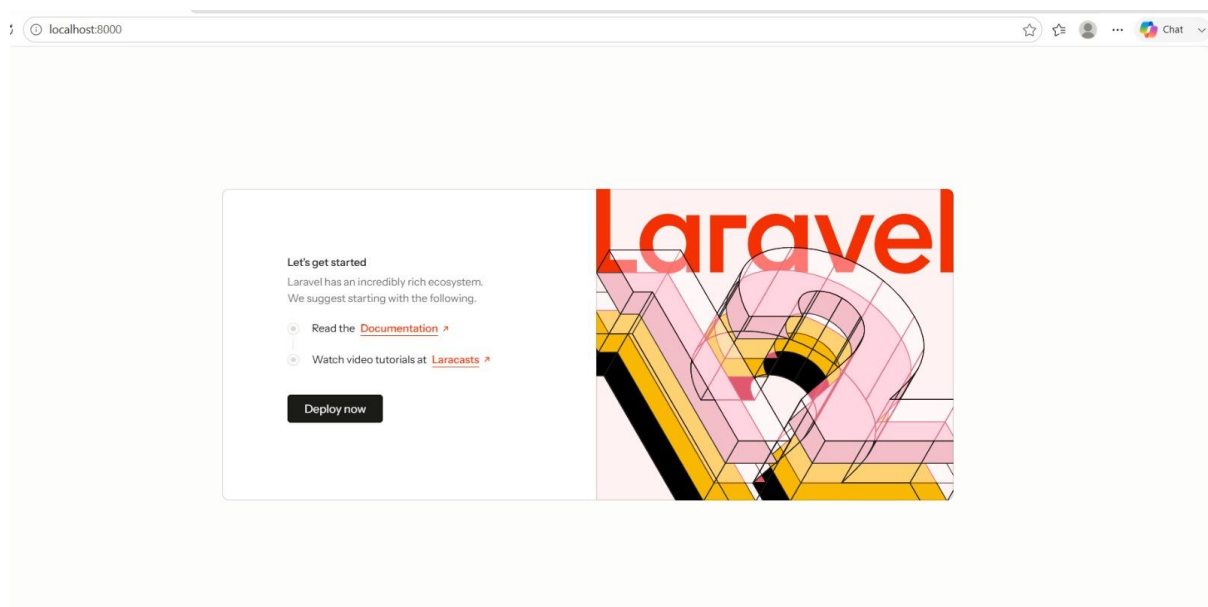

4. Launch the Development Server Once the project has been created successfully, move into the project folder and start the local development server using the commands below:

```
cd aanas
```

```
composer run dev
```

5. View the Application in Browser Open your preferred browser and type the following URL to confirm that your Laravel application is running correctly:

<http://localhost:8000>

Creating a View and Defining a Route in Laravel

1. Create the View File Launch your terminal and execute the command below to generate a new view file named **home**:

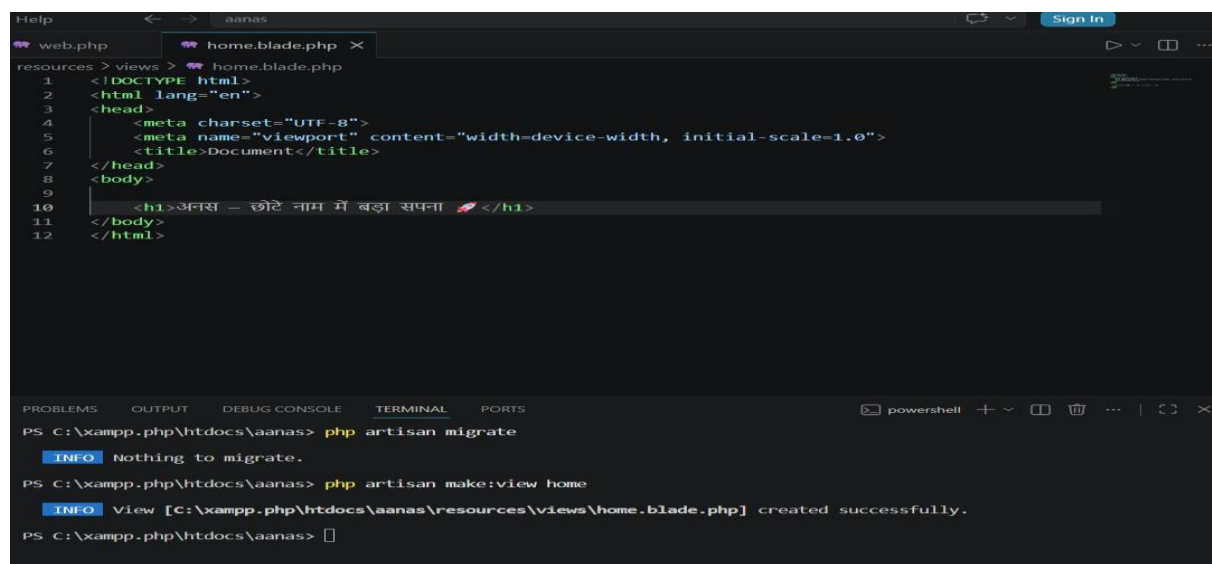

```
php artisan make:view home
```

2. Define the Route Open the web.php file and set up a route for the home page. This ensures that Laravel can properly recognize and process any incoming requests directed to that URL.

3. Edit the Blade Template Locate and open the home.blade.php file, then add the required HTML content inside it. This will serve as the foundation and layout structure of your home page.

4. Save and Preview in Browser After saving all the changes, open your browser and enter the URL below to view your home page live:

<http://localhost:8000/home>

The screenshot shows a code editor with the file `home.blade.php` open. The code is as follows:

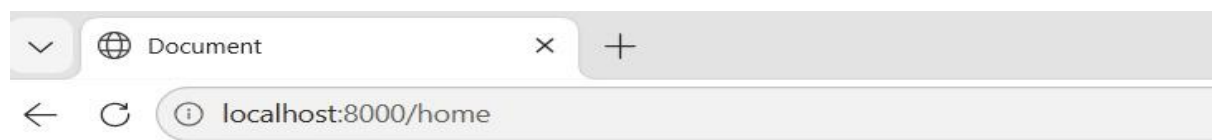

```
1 <!DOCTYPE html>
2 <html lang="en">
3 <head>
4   <meta charset="UTF-8">
5   <meta name="viewport" content="width=device-width, initial-scale=1.0">
6   <title>Document</title>
7 </head>
8 <body>
9
10  <h1>अनस — छोटे नाम में बड़ा सपना 🚀</h1>
11 </body>
12 </html>
```

Below the editor is a terminal window with the following output:

```
PS C:\xampp.php\htdocs\aanass> php artisan migrate
INFO Nothing to migrate.

PS C:\xampp.php\htdocs\aanass> php artisan make:view home
INFO View [C:\xampp.php\htdocs\aanass\resources\views\home.blade.php] created successfully.

PS C:\xampp.php\htdocs\aanass>
```

अनस — छोटे नाम में बड़ा सपना 🚀

Creating a View and Defining a Route in Laravel

1. Create the View File Launch your terminal and execute the command below to generate a new view file named **about**:

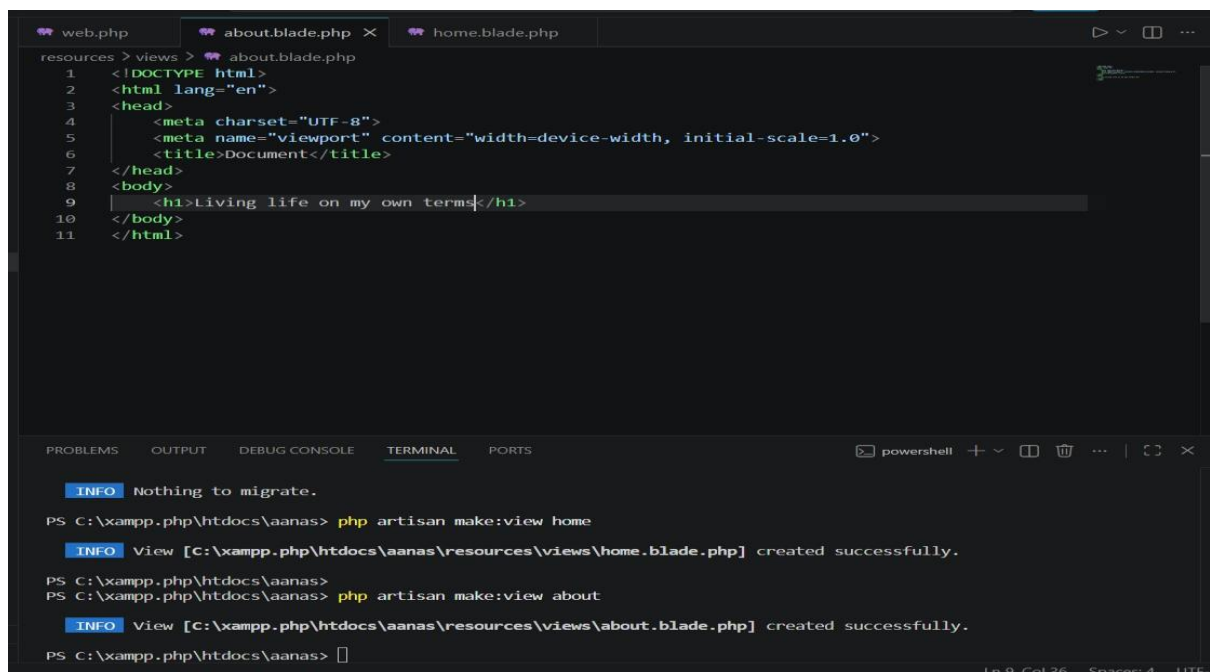

```
php artisan make:view about
```

2. Define the Route Open the web.php file and set up a route for the about page. This ensures that Laravel can properly recognize and process any incoming requests directed to that URL.

3. Edit the Blade Template Locate and open the about.blade.php file, then add the required HTML content inside it. This will serve as the foundation and layout structure of your about page.

4. Save and Preview in Browser After saving all the changes, open your browser and enter the URL below to view your about page live:

<http://localhost:8000/about>

The screenshot shows an IDE with two tabs: 'web.php' and 'about.blade.php'. The 'about.blade.php' file is open, displaying the following HTML code:

```
1 <!DOCTYPE html>
2 <html lang="en">
3 <head>
4   <meta charset="UTF-8">
5   <meta name="viewport" content="width=device-width, initial-scale=1.0">
6   <title>Document</title>
7 </head>
8 <body>
9   <h1>Living life on my own terms</h1>
10 </body>
11 </html>
```

Below the code editor, the terminal window shows the following commands and output:

```
PS C:\xampp.php\htdocs\aanass> php artisan make:view home
[INFO] View [C:\xampp.php\htdocs\aanass\resources\views\home.blade.php] created successfully.
PS C:\xampp.php\htdocs\aanass>
PS C:\xampp.php\htdocs\aanass> php artisan make:view about
[INFO] View [C:\xampp.php\htdocs\aanass\resources\views\about.blade.php] created successfully.
PS C:\xampp.php\htdocs\aanass>
```
